

STRATEGIC ENERGY MANAGEMENT

A Natural Choice.

Think Strategically, Save Successfully

Saving energy is about more than equipment upgrades. Strategic Energy Management (SEM) can help your business, school, or other facility develop a culture of energy savings. SEM focuses on the whole energy picture, which often includes measures like low-cost operational changes and simple behavior shifts.

With SEM, New Mexico Gas Company can help your facility create and maintain a statistical energy model, allowing an in-depth look at your facility's energy consumption and exactly how you use energy.

What to Expect

We can work with you to reserve your place and sign and submit a participation agreement. Once you've joined the SEM program, you'll identify your executive sponsor and on-site energy champion and attend a kick-off workshop. Then, it's time to start saving energy with project implementation and benchmarking.

Ready to discover straightforward changes that can lead to long-lasting energy savings?
